

VIavi StrataSync

StrataSync is a hosted, cloud-based software application that provides asset, configuration, and test-data management of Viavi Solutions instruments. StrataSync manages inventory, test results, and performance data anywhere with browser-based ease and improves technician and instrument efficiency.

FEATURES

- Cloud-enabled architecture provides easy network access, unmatched scalability, and high availability
- Single, intuitive, browser-based interface tracks and upgrades instruments and displays, prints, stores, and exports test results
- Complete asset management also tracks non-Viavi instruments
- Automated features quickly and easily update instrument firmware, options, and configuration files
- Template creation and alignment to instruments ensures technicians always have correct configurations
- Quickly uploads test results to a centralized storage warehouse for analysis to benchmark service and provide insight into network performance

ASSET MANAGEMENT

StrataSync asset management provides a single, intuitive way to monitor and upgrade assets in the field and office. An administrator can quickly identify out-of-date and under-utilized test sets and target updates and the reallocation of assets. With StrataSync, registration identifies which test units are assigned to each technician. StrataSync tracks each test-set sync with the server, making utilization and test practices visible. Upgrades can be applied automatically during the normal workorder process, as technicians use their test sets in the field. This dramatically reduces the amount of time spent in the work center determining the fit-for-purpose status of the test set, identifying upgrade requirements, and then manually upgrading the test set.

TEST-DATA MANAGEMENT

StrataSync stores test data in a central location, enabling viewing and sharing of test-data results. Often, data is not centrally collected and its long-term value is underrated. The causes of repeat truck rolls are obscure, and data from previous tests is not available or is not analyzed. With StrataSync, critical plant-performance information is stored in a secure location, enabling proactive problem-area identification.
