

SEGMENTABLE FIBRE NODE 2X2 FOR HFC

ONS 9238 is one of the most advanced optical nodes dedicated to traditional HFC and FTTB networks. Besides its compact size the node is distinguished by a high output level and a low power consumption. The ONS can be adjusted uninterruptedly and is remote controllable with FOSTRA control modules. The main advantages of the device include the following modes:

- „AUTOALIGNMENT“, depending on the given input parameters of optical signal and the parameters of RF output signal, it enables automatic internal control, which ensures that the programmed parameters are obtained.

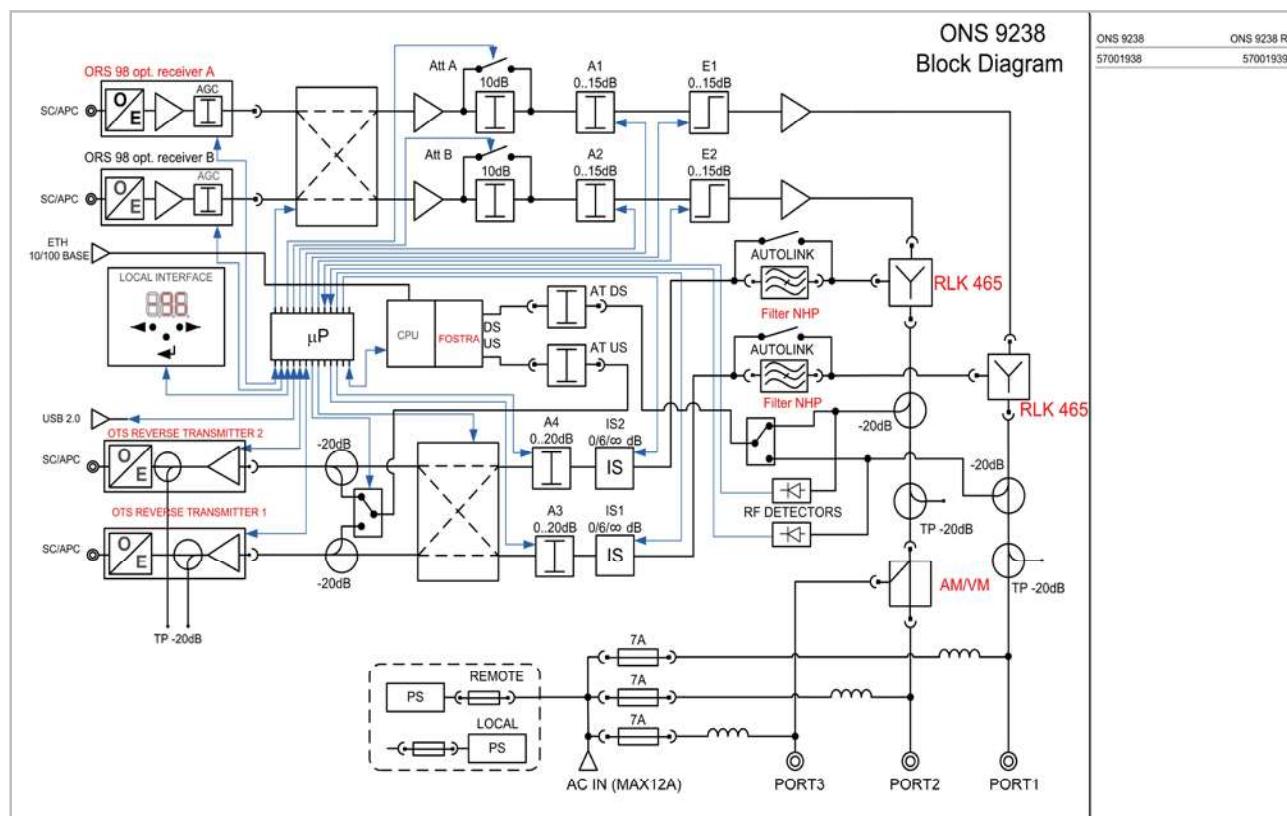

The ONS can be equipped with monitoring module including RJ45 or SFP interface.

Depending on the need, there is a possibility of remote monitoring using fibre optic or copper medium. Total independence from DOCSIS infrastructure and RF parameter measurement system allows the operator to consciously control and change the quality of received signals. ONS 9238 can cooperate with an optical switch, forming an independent monitoring infrastructure or optional with DOCSIS or HMS monitoring system.

- 1 GHz frequency range
- Designed to work in HFC, FTTLA, FTTLN, FTTB or FTTC networks
- Easy configuration, electronic adjustment and universal plug-in modules
- Built-in AGC (Automatic Gain Control)
- 3-DIGIT LED display
- 2x2 full redundancy and segmentation in forward and reverse
- Local or remote powering
- Monitoring via SNMP v2c and WWW
